Lab7 Report

1. SNR:

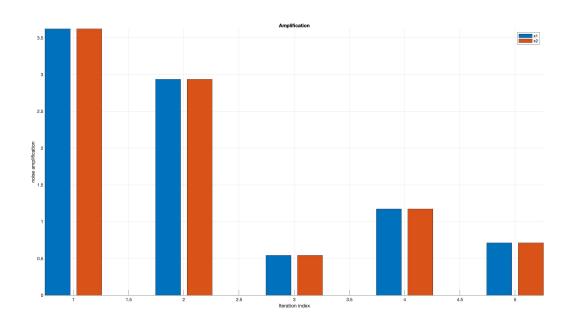

- (1) 在simu-4時,最接近siso-theory算出來的結果,simu-1、 simu-2偏低,simu-3、simu-5偏高
- (2) 隨著distance的增加,SNR會逐漸遞減,這在所有的simulation都可以看出來

2. Channel angle:

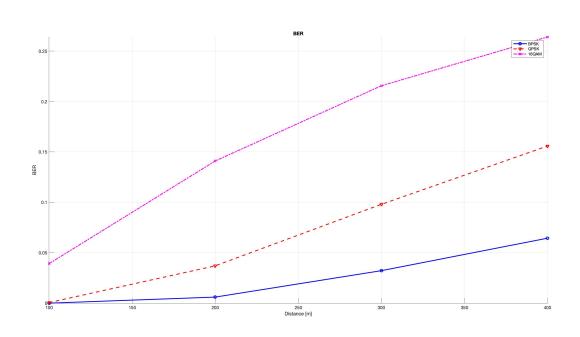

Angle的部分看不太出結果

3. Noise amplification:

- (1) Iteration index的增加, noise amp似乎會遞減
- (2) x1和x2的結果不會變

4. BER:

- (1) 隨著distance的增加,BER的大小也會隨之變大,BPSK、QPSK、16QAM都成立
- (2) 隨著distance的增加,三種modulation的BER差距也會跟著變大
